Annotation of the syllabus of the practice

Training practice, clinical practice

Graduate qualification: Specialist Field of training: 31.05.01 General medicine

Author: Popov Vladimir Viktorovich, Head of the Department of Family and Internal Medicine, Professor of the Department of Family and Internal Medicine, Doctor of Medical Sciences; Trohova Maria Vasilyevna, Associate Professor of the Department of Family and Internal Medicine: Trofimova Anastasia Alexandrovna, Assistant of the Department of Family and Internal Medicine

Tasks of the practice -formation of knowledge, abilities and skills of compliance with medical ethics and deontology when caring for patients; - acquaintance with the work organization of medical institutions; - formation of skills and abilities for the patient care, including patients with diseases of various body systems; - formation of skills and abilities to collect biological material for laboratory research and preparation of patients for instrumental examination methods; - formation of skills in providing emergency first aid. Position of the practice within the structure of the educational program (EP) Block 2. Basic part. Practices, including the research work (RW). Simulation center practice. Such disciplines as Bioethics, Human Anatomy, Normal Physiology are necessary to study for performing that kind of practice. The knowledge and practical skills obtained in the study of the disciplines of a therapeutic profile and for undergoing hospital based practice as a ward nurse assistant and a procedure room nurse assistant. Year of study, term I/2 Lectures (L) 2 Practice workload Practice workload Practical classes (PC)	Internal Medicine
